

# Enbarr

Innovation with Stallion's Enbarr compressor, meticulously designed for applications where space is at a premium, and conventional access doors prove impractical. The open-concept design prioritizes exceptional installation flexibility and ease of maintenance, making it the optimal choice for installations dealing with limited space constraints. Vertically configured, Enbarr compressors encapsulate Stallion's renowned features and technology, ensuring a reliable and high-performance compressed air solution that consistently exceeds customer expectations.

Enbarr's standard features include a 6000 psi capability, offering users the flexibility to choose from 10, 15, or 20 horsepower to cater to diverse applications. The purification system is intricately matched to the compressor output, ensuring optimal functionality. Operating and monitoring the system is a seamless experience with the color touch-screen operator interface, equipped with shut-down alarms and on-screen status messages. Additionally, the Stallion Sample Tap System (STS) simplifies air sample retrieval. Customize your compressed air solution with Enbarr's optional features, including a CO Monitor, Moisture Monitor, and Extended Life Purification Upgrades, seamlessly combining innovation and practicality. With standard dimensions of **39-3/8"W x 33-1/8"D x 58-1/8"H.**
