

Pegasus

Step into a new era of compressed air technology with the Pegasus Vertically Enclosed Compressor. This state-of-the-art system seamlessly integrates cutting-edge technology, ensuring unparalleled ease of operation and extended longevity. Designed to thrive in environments where noise levels are of concern and elevated system controls are preferred, the Pegasus guarantees smooth and quiet operation. When you choose the Pegasus, you're making an investment in a meticulously designed system that excels in optimal performance and stands the test of time.

The Pegasus, known for its standard features, delivers a 6000 psi output and offers horsepower options ranging from 10 to 25. Its compressor's purification system, intricately tailored to the output, operates quietly within a fully enclosed cabinet. Designed for user convenience, latching service access doors and fold-down front panels facilitate easy maintenance. The color touch-screen operator interface ensures simplicity in automated operation and monitoring, complete with shut-down alarms and on-screen status messages. The Stallion Sample Tap System (STS) guarantees effortless air sample retrieval. Optional features include a CO Monitor, Moisture Monitor, and a Spring Rewind Hose Reel Module, available in 50', 75', or 100'.

Notably, the hose reel module adds to the overall width.

The standard dimensions of the Pegasus are **44"W x 34-1/8"D x 74-5/8"H**.
